

Danila Igoshin.

SENIOR FRONTEND ENGINEER · REACT / TYPESCRIPT CONTRACTOR

REACT · TYPESCRIPT · NEXT.JS

B2B SAAS · COMPLEX UIS · DASHBOARDS · AI WORKFLOWS

AVAILABLE NOW – CONTRACT · FULL-TIME · EMEA

Six years of production frontend – React, TypeScript and Next.js for B2B SaaS. I take products that are *slow, stuck or unbuilt* and ship them: builds made 10× faster, a booking cart made +300% faster, a full TypeScript migration of a large codebase, an EdTech MVP taken from empty repository to live in five months – solo. Currently building an AI-assisted research platform (React 19, Monaco, LaTeX/Typst). Numbers below come from production profiling, CI timings and before/after traces – method shown on request.

Selected *impact*

MEASURED, NOT ESTIMATED

10× faster builds – Webpack → Vite; the whole team ships faster

+300% booking-cart performance via state & render restructuring

100% TypeScript – full migration incl. a custom UI library, in a year

+70% chat rendering – virtualization for 1,000+-message threads

5mo empty repository → live EdTech MVP, sole frontend engineer

3 developers mentored – code reviews, internal tech talks

Experience

2020 – PRESENT

Morizo Digital — *Senior Frontend Engineer*

CONTRACT · FEB 2026 – PRESENT

AI-assisted research platform for scientists · React 19 · TypeScript · Vite · Zustand · Monaco · PDF.js · Milkdown · Yjs · Amplitude

- Build Monaco-based LaTeX/Typst authoring: autocomplete, shortcuts, auxiliary TeX files, save flows and plain-text fallbacks.
- Compiled-PDF preview with *source-to-error mapping* and graceful handling of LaTeX/Typst compilation errors.
- AI-chat UX for research workflows: per-message model selection, reasoning blocks, token-usage labels, response actions.
- Admin tooling with server-paginated user management, Amplitude analytics, EN/RU localization.

Smartway — *Senior Frontend Engineer*

CONTRACT · AUG 2025 – JAN 2026

Support automation for a corporate travel platform · Preact · TypeScript · Vite · Redux Toolkit · WebSocket · OpenAPI codegen

- Built a real-time support-chat widget and ticket-management admin panel; *embeddable architecture* with a public integration API.
- Made 1,000+-message threads render *70% faster* with list virtualization.
- Migrated authentication to an HMAC-based scheme *preserving backward compatibility*; drag-and-drop uploads for 15+ file formats; redesigned ticket routing for hotels, flights, rail and transfer teams.
- Introduced practical LLM workflows (architecture, code review, test generation); wrote internal guidelines and trained the team.

Smart Online Institute — *Frontend Engineer, sole frontend*

CONTRACT · FEB – AUG 2025

EdTech MVP, psychology-education platform · Next.js · TypeScript · Tailwind · shadcn/ui · React Query · Zod · Strapi · Docker · Playwright · AWS S3

- Took the platform from *empty repository to live MVP in five months*: course marketplace, student profiles, booking and scheduling with auto-generated video-call links, instructor admin with progress charts, secure media viewer over S3.
- Implemented a BFF layer in Next.js; set up GitLab CI/CD and Docker-based deployment from scratch.
- Automated legacy-data migration with *Playwright scraping* where no API existed.

Smartway — *Senior Frontend Engineer → Tech-lead*

MAR 2021 – FEB 2024

Corporate travel platform: flights, trains, taxis, transfers, hotels, approvals · React · Redux · MobX · React Query · Next.js · TypeScript · Vite · React Native

- Led TypeScript adoption: introduced TS and *fully migrated the entire project*, including a custom UI library, within a year.
- Migrated the build from Webpack to Vite — *10× faster builds*; optimized booking-cart performance by *+300%* through state and rendering restructuring.
- Developed the analytics module — interactive tables and charts for expense and trip insights; implemented full i18n for English-language support.
- Established code-quality standards, CI/CD pipelines and internal documentation; ran tech talks and mentored *3 developers* through regular code reviews.

Germo-S — *Full-stack Engineer, solo developer*

JAN – AUG 2020

Solo-built B2B e-commerce platform for industrial equipment · Nuxt.js · Vue 2 · Vuex · Express · MongoDB

- Built and shipped a complete B2B store alone: catalogue, search, filtering, cart, order management, custom CMS admin, REST API and production deployment.

Core *skills*

TOOLS FOLLOW THE PROBLEM

FRONTEND	React, TypeScript, Next.js, JavaScript, HTML, CSS
STATE / DATA	Redux Toolkit, Zustand, MobX, React Query, REST, OpenAPI, WebSocket
PRODUCT UI	dashboards, admin panels, internal tools, complex forms, AI chat, document editors (Monaco)
PERFORMANCE	profiling, rendering optimization, virtualization, build optimization, Vite migrations
ARCHITECTURE	Feature-Sliced Design, modular boundaries, design systems, Storybook
QUALITY	Playwright, testing practices, CI/CD (GitLab, Jenkins), Docker, code review, linters, pre-commit hooks
AI TOOLING	Claude, Cursor — exploration, refactoring, docs; LLM workflows and guidelines for teams. Instruments, not authors.

Contract *fit*

HOW TO USE ME

Best fit

B2B SaaS teams working on complex React interfaces — dashboards, internal tools, admin panels, editor and document workflows, AI-enabled product UX.

Typical work

Feature delivery, frontend architecture, performance profiling and rendering optimization, TypeScript migrations, state and data-flow cleanup, developer experience.

Working style

Ownership-focused and documentation-friendly; comfortable in product teams, code review, async collaboration and fast-moving client environments.

ENGAGEMENT SHAPES

Performance rescue — 2–6 weeks, fixed scope, before/after report your team can verify · *Migration* — JS→TS, Webpack→Vite, legacy→Next.js, alongside feature work · *MVP build-out* — 3–6 months, zero to live, solo · *Embedded senior* — 3–6 months inside your team. Remote · full EU overlap (UTC+3) · EN/RU · B2B invoicing.

Education

Penza State University — Computer Science
2016 – 2020
