Location	Yerevan, Armenia - UTC+4 - EU overlap

Six years shipping B2B products, from solo full-stack e-commerce to a production EdTech MVP and an AI-assisted research workspace. Deep frontend expertise with hands-on experience across **product workflows, APIs, databases, integrations, and deployment.** I take ownership of implementation, technical decisions, and the path to production.

≈10×
faster builds after Webpack-to-Vite migration

≈3×
faster measured shopping-cart interactions

70%
faster rendering for 1,000+ message threads

5 mo.
empty repository to production EdTech MVP

Experience

2025 – present

Morizo Digital

Feb 2026 – present

Senior Frontend Engineer, client engagement

AI-assisted scientific research platform – React 19 – TypeScript – Vite – Zustand – Monaco – PDF.js – Yjs – Amplitude

- Build a connected research workflow spanning LaTeX/Typst authoring, compiled-document review, and AI assistance, with reliable saves and source files.
- Connect PDF.js previews and compile errors to source so scientists can review output and resolve failures within the authoring workspace.
- Implement AI research UX with per-message models, reasoning states, token usage, errors, and reusable response actions.
- Deliver analytics instrumentation, paginated admin tooling, environment-aware runtime configuration, and EN/RU localization.

Smartway

Aug 2025 – Jan 2026

Senior Frontend Engineer, second engagement

Real-time support automation – Preact – TypeScript – Vite – Redux Toolkit – WebSocket – OpenAPI

- Returned to Smartway to build an embeddable support widget and ticket-management workspace with a public integration API.
- Made conversations with more than 1,000 messages render **70% faster** through list virtualization.
- Migrated authentication to HMAC while preserving compatibility; added validated uploads for 15+ formats and domain routing.
- Introduced practical LLM workflows for architecture, review, and testing; wrote guidelines and trained the team.

Smart Online Institute

Feb – Aug 2025

Sole Frontend Engineer

Production EdTech MVP – Next.js – TypeScript – React Query – Zod – Strapi – Playwright – AWS S3 – Docker

- Took the product from an empty repository to a live MVP in approximately five months within a seven-month engagement: marketplace, profiles, learning progress, booking, and instructor tools.
- Implemented a Next.js BFF for API orchestration and validation, protected S3 media delivery, and a release pipeline with GitLab CI/CD and Docker.
- Automated legacy-data migration with Playwright scraping where the previous service exposed no API.

Experience, continued

2020 – 2024

Smartway

Mar 2021 – Feb 2024

Senior Frontend Engineer to Tech Lead

Corporate travel platform – React – TypeScript – Redux – MobX – React Query – Vite – React Native – Storybook – Jenkins

- Introduced TypeScript and completed the product-wide migration, including a custom UI library, within one year.
- Replaced Webpack with Vite for **approximately 10× faster builds**; made measured shopping-cart interactions **approximately 3× faster** through state and render restructuring.
- Built interactive expense and trip analytics; delivered full English localization and contributed to React Native product surfaces.
- Established code-quality and CI/CD practices, documented decisions, ran technical talks, and mentored three developers.

Germo-S

Jan – Aug 2020

Full Stack Engineer, sole developer

B2B e-commerce – Nuxt.js – Vue 2 – Vuex – Express – MongoDB

- Built and shipped a B2B e-commerce product as the sole developer: Vue/Nuxt interfaces, an Express REST API, MongoDB, a custom CMS, catalog, cart, orders, and production deployment.

Core skills

Across the product stack

Product interfaces

React, TypeScript, Next.js, JavaScript, Preact, Vue, complex workflows, AI chat, editors

Backend and data

Node.js, Express, Next.js BFF, REST, PostgreSQL, MongoDB, OpenAPI, WebSocket

Delivery and infrastructure

Docker, Kubernetes, AWS S3, GitLab CI/CD, Jenkins, environment configuration

Quality and performance

Playwright, profiling, virtualization, build optimization, code review

Architecture

API boundaries, modular systems, React Query, Zustand, Redux Toolkit, design systems

Product and teamwork

Analytics instrumentation, zero-to-one delivery, written decisions, mentoring, technical leadership

Where I fit

Product ownership – Technical depth

Product delivery

Turn complex workflows into working features, from implementation decisions through release.

Full-stack implementation

Connect interfaces, server-side logic, APIs, data, and deployment around the product's needs.

Systems that evolve

Improve performance and architecture incrementally while the team keeps shipping.

Working format: remote from Yerevan, Armenia (UTC+4), with EU working-day overlap. Open to Product Engineer and Full-stack roles, full-time or long-term contract, through an EOR or B2B arrangement.

Education

Penza State University - Computer Science

2016 - 2020

Languages and availability

Russian - native - English - professional working proficiency

Open to remote opportunities - full-time / contract - based in Yerevan, Armenia
