Based in GMT+3 - Open to EMEA remote contracts and relocation

SUMMARY

Senior Frontend Engineer with 6 years of experience building complex B2B SaaS interfaces, internal tools, dashboards, and AI-enabled product workflows. Strong in React, TypeScript, and Next.js, with a focus on performance, scalable frontend architecture, product UX, and developer experience. Delivered measurable improvements including 10x faster builds, 70% faster chat rendering, 300% shopping cart performance improvement, and a full TypeScript migration of a large production codebase.

SELECTED IMPACT

- Migrated a large production frontend and custom UI library to TypeScript within 1 year.
- Improved build performance by 10x by migrating from Webpack to Vite.
- Improved chat rendering performance by 70% using list virtualization for 1000+ messages.
- Optimized shopping cart performance by 300% through state and rendering improvements.
- Built and shipped an EdTech MVP from scratch in 5 months.
- Mentored 3 frontend developers through code reviews, internal talks, and technical guidance.

CORE SKILLS

Frontend: React, TypeScript, Next.js, JavaScript, HTML, CSS

State/Data: Redux Toolkit, Zustand, MobX, React Query, REST, OpenAPI, WebSocket

Product UI: dashboards, admin panels, internal tools, complex forms, AI chat, document editors

Quality: Playwright, testing practices, CI/CD, code review, linters, pre-commit hooks

Performance: Vite migration, rendering optimization, virtualization, build optimization

Architecture: Feature-Sliced Design, modular architecture, design systems, Storybook

Tools: GitLab, Jenkins, Docker, AWS S3, Figma, Cursor, Claude, GPT

EXPERIENCE

Morizo Digital - Senior Frontend Engineer Feb 2026 - Present

Client project / AI-assisted research platform for scientists

Tech: React 19, TypeScript, Vite, Zustand, Monaco Editor, PDF.js, Milkdown, Yjs, SCSS, Amplitude

- Built scientific authoring workflows in Monaco Editor for LaTeX/Typst: autocomplete, shortcuts, auxiliary TeX files, save flows, minimap controls, and plain-text fallback states.
- Improved compiled PDF preview UX with source-to-error mapping, graceful fallback states, and better handling of LaTeX/Typst compilation errors.
- Refined AI chat UX for research workflows: per-message model selection, reasoning/thinking blocks, token usage labels, inline errors, and assistant response actions.
- Integrated Amplitude analytics and admin tooling with environment-aware runtime configuration, server-paginated user management, organization/test-user indicators, and EN/RU localization.

Smartway - Senior Frontend Engineer Aug 2025 - Jan 2026

Project-based role / corporate travel platform / support automation

Tech: Preact, TypeScript, Vite, Redux Toolkit, WebSocket, SCSS Modules, OpenAPI codegen, GitLab

- Built a real-time customer support chat widget and ticket-management admin panel for a corporate travel booking platform.
- Improved chat rendering performance by 70% using list virtualization for conversations with 1000+ messages.
- Built embeddable widget architecture with a public integration API and migrated authentication to an HMAC-based scheme while preserving backward compatibility.
- Built Drag&Drop file upload and validation flows for 15+ file formats; redesigned ticket categorization and routing for hotels, flights, rail, and transfer support teams.
- Introduced practical LLM workflows for architecture design, code review, and test generation; created internal guidelines and trained the team.

Smart Online Institute - Frontend Engineer Feb 2025 - Aug 2025

EdTech MVP / psychology education platform

Tech: Next.js, TypeScript, TailwindCSS, shadcn/ui, React Query, React Hook Form, Zod, Strapi, GitLab CI/CD, Docker, Playwright, AWS S3

- Built an EdTech MVP in 5 months: course marketplace, student profiles, booking, instructor scheduling, learning progress, and secure media access.
- Implemented booking and scheduling flows for practice sessions with automatic video call link generation.
- Created instructor admin panel for schedule/session management and learning progress visualization with Recharts.
- Built secure media viewer for video, audio, PDF, and DOC educational content stored in AWS S3.
- Set up GitLab CI/CD and Docker-based deployment; implemented a BFF layer in Next.js for API orchestration.
- Automated data migration from a legacy service using Playwright scraping where no API was available.

Smartway - Senior Frontend Engineer Mar 2021 - Feb 2024

Corporate travel management platform / frontend platform and product UI

Tech: React, Redux, MobX, React Query, Next.js, Storybook, CSS Modules, TypeScript, Vite, React Native, Jenkins, i18n

- Built and scaled a web platform for booking and managing business travel: flights, trains, taxis, transfers, hotels, and approvals.
- Led TypeScript adoption: introduced TS to the codebase and fully migrated the entire project, including a custom UI library, within 1 year.
- Migrated build tooling from Webpack to Vite, achieving 10x faster build times; optimized shopping cart performance by 300%.
- Developed analytics module with interactive tables and charts for expense and trip insights; implemented full i18n for English-language support.
- Established code quality standards, CI/CD pipelines, internal documentation, and technical talks; mentored 3 developers through regular code reviews.

Germo-S - Full Stack Engineer Jan 2020 - Aug 2020

Solo-built B2B e-commerce platform for industrial equipment

Tech: Nuxt.js, Vue 2, Vuex, Express.js, MongoDB, CSS

- Built and shipped a complete B2B e-commerce platform from scratch as the sole developer: catalog, search, filtering, cart, order management, custom CMS admin panel, REST API, and production deployment.

CONTRACT FIT

Best fit

B2B SaaS teams working on complex React interfaces, dashboards, internal tools, admin panels, editor/document workflows, and AI-enabled product UX.

Typical work

Feature delivery, frontend architecture, performance profiling, rendering optimization, TypeScript migrations, state/data-flow cleanup, and developer experience improvements.

Working style

Ownership-focused, documentation-friendly, comfortable in product teams, code reviews, async collaboration, and fast-moving client/project environments.

EDUCATION

Penza State University - Computer Science, 2016-2020

LANGUAGES / AVAILABILITY

Russian - native | English - professional communication
Available for remote EMEA contracts and relocation opportunities

HOW I WORK

01

Performance first

Profile before optimizing.
Measure after.

02

Architecture that scales

Modular boundaries, FSD, public APIs.

03

Types are documentation

TypeScript migrations and safer product code.

04

Write the docs

Keep teams moving with clear handoffs.

05

AI as instrument

Use Claude/Cursor for exploration, refactoring, and docs.
